REAL

CODEWRITING

SCORE: 300/300

Define a *word* as a sequence of consecutive English letters. Find the longest *word* from the given string.

### Example

For `text = "Ready, steady, go!"`, the output should be  
`longestWord(text) = "steady"`.

### Input/Output

- **[execution time limit] 4 seconds (js)**
- **[input] string text**

*Guaranteed constraints:*

$4 \leq \text{text.length} \leq 50$ .

- **[output] string**

The longest *word* from `text`. It's guaranteed that there is a unique output.

### [JavaScript (ES6)] Syntax Tips

```
// Prints help message to the console
// Returns a string
function helloWorld(name) {
    console.log("This prints to the console when you Run Tests");
    return "Hello, " + name;
}
```
