CODEWRITING

SCORE: 300/300

CodeMaster has just returned from shopping. He scanned the check of the items he bought and gave the resulting string to Ratiorg to figure out the total number of purchased items. Since Ratiorg is a bot he is definitely going to automate it, so he needs a program that sums up all the numbers which appear in the given input.

Help Ratiorg by writing a function that returns the sum of numbers that appear in the given `inputString`.

Example

For `inputString = "2 apples, 12 oranges"`, the output should be
`sumUpNumbers(inputString) = 14`.

Input/Output

- [execution time limit] 4 seconds (js)
- [input] string `inputString`

Guaranteed constraints:

$6 \leq \text{inputString.length} \leq 60$.

- [output] integer

[JavaScript (ES6)] Syntax Tips

```
// Prints help message to the console
// Returns a string
function helloWorld(name) {
    console.log("This prints to the console when you Run Tests");
    return "Hello, " + name;
}
```
