palindromeRearranging

**DESCRIPTION**

SOLUTIONS 14286

COMMENTS 71

CODEWRITING

SCORE: 300/300

Given a string, find out if its characters can be rearranged to form a **palindrome**.

Example

For `inputString = "aabb"` , the output should be
`palindromeRearranging(inputString) = true` .

We can rearrange `"aabb"` to make `"abba"` , which is a palindrome.

Input/Output

- **[execution time limit] 4 seconds (js)**
- **[input] string inputString**

A string consisting of lowercase English letters.

Guaranteed constraints:

$1 \leq \text{inputString.length} \leq 50$.

- **[output] boolean**

`true` if the characters of the `inputString` can be rearranged to form a palindrome, `false` otherwise.

[JavaScript (ES6)] Syntax Tips

```
// Prints help message to the console
// Returns a string
function helloWorld(name) {
    console.log("This prints to the console when you Run Tests");
    return "Hello, " + name;
}
```
