BACK   First Reverse Try   ⌄

DESCRIPTION   SOLUTIONS 8974   COMMENTS 7   〉   CODEWRITING   SCORE: 300/300

Reversing an array can be a tough task, especially for a novice programmer. Mary just started coding, so she would like to start with something basic at first. Instead of reversing the array entirely, she wants to swap just its first and last elements.

Given an array `arr` , swap its first and last elements and return the resulting array.

Example

For `arr = [1, 2, 3, 4, 5]` , the output should be
`firstReverseTry(arr) = [5, 2, 3, 4, 1]` .

Input/Output

- **[execution time limit] 4 seconds (js)**

- **[input] array.integer arr**

  Guaranteed constraints:
  `0 ≤ arr.length ≤ 50` ,
  $-10^4 ≤ arr[i] ≤ 10^4$.

- **[output] array.integer**

  Array `arr` with its first and its last elements swapped.

[JavaScript (ES6)] Syntax Tips

```
// Prints help message to the console
// Returns a string
function helloWorld(name) {
    console.log("This prints to the console when you Run Tests");
    return "Hello, " + name;
}
```
